Product Description

China Wholesale Cylinder Gas best price High purity BCl₃ Boron Trichloride

Boron trichloride, or BCl₃, is a chemical compound composed of boron and chlorine. It is a colorless, toxic gas with a pungent odor. Boron trichloride is notable for its electron-deficient nature, as boron only has three valence electrons and forms three covalent bonds with chlorine atoms in this compound.

BCl₃ is primarily used as a reagent in organic synthesis and as a catalyst in various chemical reactions. It is known to react with nucleophiles, such as alcohols and amines, to form boron compounds. Additionally, it can act as a Lewis acid, accepting pairs of electrons from Lewis bases in chemical reactions.

Due to its toxic and reactive nature, boron trichloride should be handled with caution. It can cause severe burns upon contact with the skin or eyes and can be harmful if inhaled or ingested. Proper safety measures, including the use of protective equipment and working in a well-ventilated area, should be followed when working with BCl₃.
